Heaps are usually used to implement priority queues, where the smallest (or largest) element is always at the root of the tree. Basics Binary Heap Applications Library Implementations Heap in C++ STL priority_queue in C++ PriorityQueue in Java PriorityQueue in C# heapq in Python Heap in JavaScript Easy Problems Check if an array is Heap? K'th Smallest & K'th Largest Heap Sort Heap Sort for Decreasing Order Height of a Heap with N Nodes Medium Problems Nearly Sorted Array K Largest Elements & K Smallest k Closest Elements Max diff between two m Sized Subsets Check if Binary Tree is Heap Huffman Coding Nodes less than a value in a Min Heap. Connect n ropes with minimum cost K maximum sum combinations from two arrays K'th largest in a stream Largest triplet product in a stream k most frequent Min Heap to Max Heap Check for Min-Heap from Level Order BST to Min Heap K Closest Points to the Origin Hard Problems The Skyline Problem Median in a stream K-th Largest Sum Subarray Sort by Frequency Merge k sorted arrays & Linked Lists Range Covering K Sorted Lists Prim's Minimum Spanning Tree Dijkstra's Shortest Path Sort from different machines Largest Derangement of a Sequence Merge two binary Max Heaps Sum of all between k1'th and k2'th smallest A data structure with min and max Other Types of Heaps Binomial Heap Fibonacci Heap Leftist Heap K-ary Heap Quick Links: Interview Questions on Heap Practice Problems on Heap Quiz on Heap DSA Tutorial Comment Article Tags: Article Tags: Heap DSA
