The order may be LIFO(Last In First Out) or FILO(First In Last Out) . LIFO implies that the element that is inserted last, comes out first and FILO implies that the element that is inserted first, comes out last. It behaves like a stack of plates, where the last plate added is the first one to be removed. Think of it this way: Pushing an element onto the stack is like adding a new plate on top. Popping an element removes the top plate from the stack. Basics Introduction Applications Array Implementation Linked List Implementation Implementation using Deque Implementations in Different Languages Stack in C++ STL Stack in Java Stack in Python Stack in C# Stack in JavaScript Stack in C Easy Problems The Celebrity Problem Queue using Stacks Two stacks in an array Infix to Postfix Prefix to Infix Prefix to Postfix Postfix to Prefix Postfix to Infix Infix To Prefix Check for balanced parentheses Evaluation of Postfix Expression Reverse a stack using recursion Reversing the first K of a Queue A DS with O(1) Operations Medium Problems k Stacks in an Array Mergable Stack Stack using Queues Previous Smaller Element Next Greater Element Stock Span Problem Buildings Facing Sun Next Smaller of next Greater Next Greater Frequency Max product of indexes of greater on left and right Iterative Tower of Hanoi Sort a Stack Reverse a Stack Delete middle of a stack Check for queue sortable Check for stack sortable Index of closing bracket for a given opening bracket Max Diff between nearest left and right smaller Delete consecutive same words Hard Problems Largest Rectangle in a Histogram Sum of Max of all Subarrays Max of Mins of every window size Stack that supports getMin() Stack with max frequency Longest valid substring Check Redundant Bracket Stack Permutations Remove brackets containing + and – operators Quick Links : Practice Coding on Stack Quiz on Stack DSA Tutorial Comment Article Tags: Article Tags: Stack DSA
